

Use the following tables which were created in the previous lab session.

DBSchema {
Product (Prodid, Description, Price, Stock);
Purchase(Purchaseid, Prodid, Quantity, Suppliername);
Sales (Saleid, Prodid, Quantity, Customername); }

Show the schema of each table.

1. Create a synonym <Synmname> for the table purchase by selecting purchaseid and suppliername.
Show the contents of the Synmname after insertion
2. Delete the contents of Sales table.
3. Add serialno column to the Sales table.
4. Create a sequence to assign serial number to the Sales table entries.
