

## **JAVA LAB WEEK 13 (3/11/23) SPOT QUESTION**

Create a class called Dictionary that has fields word(String) and meaning (String).

Define constructor and toString() methods. Implement a driver program that

creates at least five Dictionary objects and stores in an arraylist, the duplicate

word meaning pair(if any) in the arraylist should be deleted and Dictionary

objects must be displayed. Ensure that each word have one meaning, cannot be

more than than one.
