

## SPOT (WEEK 10)

1. Write a C program to search a string in the list of strings.
2. Write a c program for the given scenario using - call by value and call by reference
  - i) Get the total number of tickets available for booking per day.
  - ii) Get the number of tickets already booked.
  - iii).
  - iv) Pass the two values i) and ii) to a function called book\_ticket(var1, var2).
  - v) Get the numbers tickets need to book, inside a function book\_ticket().
  - vi) Check the availability of tickets for booking.  
If available, book the ticket and reflect the chance in the calling function.
