

**Week 13(25/2/22)**

1. Define a structure data type named Census with the members: a character array city[] to store names, a long integer to store population and a float member to store the literacy level.

Write a program to do the following:

- i) To read the details of five cities randomly using array variable.
- ii) To sort the list alphabetically on city
- iii) To sort the list based on literacy level
- iv) To sort the list based on the population
- v) To display sorted list
