

CS6101 – Programming with C

Date : 20-Dec- 2021

Level 1

Use if. Get two numbers from user. Use if to display if first number is smaller than second.

2. Use while. Repeatedly (again and again), get number from user and display the number till the input number is 0.

3. Use for. First get from the user how many numbers he wants to input. Then get so many numbers from the user and find the sum of these numbers.

4. Do Question 3 using do while instead of 'For'.

5. In question 1, use else if to display if the first number is larger than, same as, or less than the second number
